

Investigational Drug Services (IDS)

The Investigational Drug Service (IDS) of the Morehouse School of Medicine is responsible for the consistent and centralized management of pharmaceutical/investigational drug protocols used in human subject research, at all sites under the Clinical Research Center (CRC). The Investigational Drug Service serves as the management unit for the storage, dispensing and disposal of study medication for many clinical trials. It ensures standardization of procedures within each protocol, and further protects human subjects who participate in research protocols, through improved drug safety and accountability measures.

Investigational Drug Services	Rate	Comments
Pharmacist Consultation	\$200/hr	
Study Initiation (Simple)	\$3000	Simple studies are defined as studies in which investigational products (IP) are utilized in the outpatient setting and do not meet specific criteria for complex studies.
Study Initiation (Complex)	\$4500	- Complex studies are defined as studies in which IP are requiring non-sterile/sterile manipulation or special handling. - Example: Reduced dosing due to impaired kidney function
Study Maintenance	\$250/mo	See below*
